EXPERIENCE

Tipsy Flamingo LLC

Mar 2026 – Present

AI Content Automation Startup

Remote

Lead Software Engineer

May 2026 – Present

- Promoted to Lead Software Engineer after 2 months; lead a team of 4 developers across 3 concurrent projects: the posting-bot backend pipeline with its automations and observability dashboards, internal marketing/content tools, and the UGC creator-program platform.
- Own sprint planning, architecture decisions, daily standups, and async PR review across all repositories; unblock developers and scope tasks into clear, hand-off-ready specs.
- Defined the team's engineering process and standards (sprint cadence, PR review workflow, manual QA gates) and authored the Lead Engineer SOP adopted across the team.
- Set technical direction for the migration to a self-contained V2 ingestion pipeline (RapidAPI scraping, transcription, and classification), retiring a brittle cross-project dependency.
- Led the UGC creator-program platform – creator and COO dashboards, post-to-creator attribution, and an automated payout pipeline with IG-handle mapping and sign-off workflows.
- Drove an attribution and observability initiative – per-account format × strategy performance matrices, allocation-health diagnostics, and daily Slack reporting – to make pipeline output measurable and tunable.

AI Automations Engineer / Software Engineer

Mar 2026 – May 2026

- Built an automated Instagram carousel posting pipeline on Firebase Cloud Functions (Python) – cron schedulers, content-remix strategies, and a classifier processing a 35k+ post corpus.
- Implemented multiple AI-driven content strategies (gender swap, cherry-pick mashup, reshuffle, rephrase, GPT-original, ABCD conversion) using OpenAI and Gemini, with dedup checks and per-account allocation.
- Developed Python design and music middleware – Pillow-based slide rendering (1080×1350) and a song-selection engine, lifting music hit rate from 27% toward 90%+ via a RapidAPI backfill.
- Built iOS device-automation tooling (WebDriverAgent) to drive multiple physical iPhones for publishing, plus an Instagram private-API music-metadata extractor (Flask + Playwright).
- Built internal marketing/content tools – a Flask dashboard for synced TikTok/Instagram posts with AI content generation (GPT-5.1) and viral-style image generation (Gemini).
- Shipped React 19 + Vite + TypeScript internal dashboards (Firestore-backed) for operational observability, classifier auditing, and strategy testing.

Software Developer

2025 – Feb 2026

RSB Consulting Inc.

Makati, Philippines

- Developed and maintained Centhris modules: Core HR, Attendance & Scheduling, Payroll, Finance (COA/AR/AP), Project Management.
- Built backend APIs and business logic using Laravel (queues, events, observers, caching, policies).
- Developed frontend interfaces using Nuxt 3, Vue 3, Pinia, and typed composables.
- Wrote automated tests using Vitest (unit/integration), Playwright (E2E), and PHPUnit (backend).
- Implemented real-time features using Socket, Pusher, and Laravel Echo.
- Created Docker-based environments with Traefik, Portainer, MinIO, Lando, Mailhog, and Nginx reverse proxies.
- Managed AWS deployments using EC2, S3, RDS, and Elastic Beanstalk.
- Implemented CI/CD pipelines with GitHub Actions and Jenkins.
- Built workflow automation using n8n for syncing, notifications, background jobs, and system events.
- Integrated AI tools (OpenAI, Claude, Gemini) into dev workflows and internal utilities to boost productivity.

Junior Marketing Technology Developer

July 2024 – Feb 2025

Altus Digital

Remote — Melbourne, Australia

- Built SQL-driven segmentation, AMPscript personalization, and automated customer journeys.
- Developed internal systems and utilities for Salesforce Marketing Cloud.
- Automated repetitive marketing processes to improve team efficiency.

Full Stack Developer Intern / Project Manager

2024

MyDreamVisa LLC

Remote — Florida, USA

- Migrated Vue codebase from Options API to Composition API and TypeScript.
- Built system-wide Tooltip and Onboarding components.
- Promoted to Project Manager; supervised two interns and ensured timely delivery of milestones.

EDUCATION

Polytechnic University of the Philippines - Sta. Rosa
B.S. Information Technology

Laguna, Philippines
2024

PROJECTS

Instagram Content Automation Platform | *Python, Firebase, React, OpenAI, Gemini* 2026 – Present

- Architected an end-to-end pipeline that scrapes viral source posts, remixes them via AI strategies, renders carousels, and publishes them through automated iOS devices at scale.
- Designed strategy, classifier, attribution, and music/design middleware as modular Cloud Functions; built observability dashboards to make output measurable.
- Led a team of 4 developers across three workstreams: the posting-bot backend pipeline and dashboards, internal marketing/content tools, and the UGC creator-program platform.

CentHRIS/Finance Modules | *PHP, Laravel, Nuxt, Vue, PostgreSQL, Docker, n8n* 2025 – 2026

- Implemented Payroll engines, tax rules, Finance workflows (COA, AR/AP), Scheduling logic, and Core HR features.
- Developed reusable UI components, composables, and stores for system-wide scalability.
- Created n8n automation flows for syncing, alerts, and scheduled jobs.
- Used AI tools to assist with code generation, documentation, and developer utilities.
- Built full test coverage using Vitest, Playwright, and PHPUnit.

e-Dukado LMS | *Next.js, Supabase* 2024

- Spearheaded capstone LMS for Santa Rosa Elementary School Central I, leveraging Next.js and Supabase for a responsive, user-friendly platform.
- Collected and analyzed student and educator feedback, driving iterative UX improvements that boosted platform adoption.

PUP Online Transaction Management System | *PHP, MySQL* 2023 – 2024

- Implemented robust authentication to safeguard sensitive data and ensure user privacy.
- Designed optimized SQL schemas and queries for efficient data retrieval and storage.
- Documented system architecture, DB schema, and codebase to streamline future maintenance and troubleshooting.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, PHP, Ruby, C, C#, C++, Java, Bash, HTML, CSS, SQL
Web & Software Development: Next.js, React.js, Quasar, Vue.js, Node.js, Supabase, PostgreSQL, MySQL, Laravel, Spring Boot, Flask
DevOps & Cloud: GitHub Actions, Docker, Portainer, CI/CD Pipelines, Serverless, Containerization & Orchestration, AWS (EC2, S3), Firebase (Firestore, Cloud Functions, Hosting), Google Cloud Run
Testing: Vitest (unit/integration), Playwright (E2E), PHPUnit (Laravel)
Automation & Integrations: n8n (workflow automation, event pipelines), WebDriverAgent (iOS device automation), Pillow (image rendering), REST/private API integrations
AI Tools: OpenAI (ChatGPT, GPT-5.1), Anthropic Claude, Google Gemini, GitHub Copilot, AI content/classification pipelines
Leadership: Team leadership (4 devs), sprint planning, architecture decisions, code review, technical mentoring
CRM/Marketing Technology: Salesforce Marketing Cloud (AMPscript, SQL, Automation Studio, Journey Builder, Email Studio)
Soft Skills: Communication, Problem-solving, Adaptability, Leadership, Time Management, Collaboration, Continuous Learning, Team-Player
Other Tools: Jira, Postman, Clickup
