

Justine Castaneda

Lead Software Engineer — AI Agent Systems & Automation

Manila, Philippines (Remote) | +63 976 077 0935 | nearbyjustine@gmail.com |
github.com/nearbyjustine | howstine.vercel.app

Summary

Lead Software Engineer with 2.5+ years of professional experience (since Feb 2024), including 1.5+ years shipping production AI automation and agentic systems. Built and led a 4-developer team delivering an AI content pipeline processing 35,000+ posts, multi-agent orchestration for classification/attribution, and iOS device-fleet automation. Full-stack across Python, TypeScript, PHP/Laravel, with hands-on agentic tooling (OpenAI, Claude, Gemini, n8n). Targeting Agentic AI Engineer / AI Automation Engineer / Senior Full-Stack roles.

Core Skills

- Languages: Python, TypeScript, JavaScript, PHP, SQL, Bash
- AI & Agents: OpenAI API, Anthropic Claude, Google Gemini, agent orchestration, multi-step AI pipelines, prompt engineering, classification/dedup systems
- Automation: n8n, WebDriverAgent (iOS device automation), Playwright, cron/scheduled pipelines, Firebase Cloud Functions
- Web/Backend: Node.js, Laravel, Nuxt 3/Vue 3, React 19, Next.js, Flask, Firestore, PostgreSQL, MySQL, Supabase
- DevOps: Docker, GitHub Actions, Jenkins, CI/CD, AWS (EC2, S3, RDS, Elastic Beanstalk), GCP Cloud Run
- Testing: Vitest, Playwright (E2E), PHPUnit
- Leadership: Sprint planning, architecture decisions, async PR review, technical mentoring (team of 4)

Experience

Lead Software Engineer — Flamingo Cards (AI Content Automation, Remote — Arizona, USA)

May 2026 – Present

- Promoted to Lead Software Engineer after 2 months; lead 4 developers across 3 concurrent projects: an AI content-automation pipeline, internal marketing tools, and a creator-payout platform.
- Own sprint planning, architecture decisions, and async PR review across all repositories.
- Defined the team's engineering process (sprint cadence, PR review workflow, QA gates); authored the Lead Engineer SOP now used team-wide.
- Directed migration to a self-contained V2 ingestion pipeline (scraping, transcription, classification), removing a brittle cross-project dependency.

- Led a creator-program platform: attribution dashboards, automated payout pipeline with IG-handle mapping and sign-off workflow.
- Built an attribution/observability system: per-account performance matrices, allocation-health diagnostics, daily automated reporting.

Software Engineer — Flamingo Cards (Remote — Arizona, USA)

March 2026 – May 2026

- Built an automated content-posting pipeline on Firebase Cloud Functions (Python): schedulers, content-remix strategies, and a classifier processing a 35,000+ post corpus.
- Implemented 6+ distinct AI content-generation strategies using OpenAI and Gemini APIs, with dedup logic and per-account allocation rules.
- Built a design/media middleware (Pillow-based rendering) and a matching engine that raised target hit-rate from 27% to 90%+.
- Built iOS device-automation tooling (WebDriverAgent) to drive a fleet of physical iPhones for publishing; built a metadata-extraction service (Flask + Playwright).
- Shipped internal React 19 + Vite + TypeScript dashboards (Firestore-backed) for pipeline observability and classifier auditing.

Full-Stack Developer — RSB Consulting Inc. (Makati, Philippines — Hybrid)

February 2025 – February 2026

- Designed and implemented full-stack features across Centhris modules: Core HR, Payroll, Finance (COA/AR/AP), Attendance & Scheduling, and Project Management.
- Architected Laravel backend services using queues, events, observers, caching layers, API resource patterns, and modular service classes.
- Built responsive frontend interfaces with Nuxt 3, Vue 3, Pinia, and typed composables, improving UI consistency and code reuse across modules.
- Implemented real-time features using Soketi, Pusher, and Laravel Echo for instant scheduling/HR updates.
- Wrote automated test suites with Vitest, Playwright, and PHPUnit, reducing regressions in mission-critical systems.
- Containerized dev environments (Docker, Traefik, Portainer, Lando, MinIO, Mailhog, Nginx); managed AWS deployments (EC2, S3, RDS, Elastic Beanstalk); built CI/CD with GitHub Actions and Jenkins.
- Designed n8n workflow automations for syncing, notifications, and scheduled maintenance tasks.
- Integrated AI tools (OpenAI, Claude, Gemini) into documentation, code scaffolding, and internal dev utilities.

Junior MarTech Developer — Altus Digital | Salesforce Partner (Remote — Melbourne, Australia)

March 2024 – February 2025

- Managed and executed email marketing deliverables: personalized campaigns, journey automations, and audience segmentation in Salesforce Marketing Cloud.
- Used SQL, AMPscript, and JavaScript to customize marketing automation, campaigns, and data segmentation per client spec.
- Built internal applications/extensions for Salesforce Marketing Cloud, reducing manual workload.
- Designed and implemented an internal tool that automated repetitive marketing processes, improving productivity and reducing errors.

Full-Stack Developer Intern / Project Manager — Savorite (Remote — Los Angeles, USA)

February 2024 – May 2024

- Led migration from Options API to Composition API in Vue.js, improving code maintainability and scalability by ~30%.
- Transitioned the codebase to TypeScript, reducing runtime errors by ~40%.
- Designed and implemented a Tooltip System and Onboarding System, reducing new-user onboarding time by ~25%.
- Promoted to Project Manager; mentored two interns, lifting team productivity ~20% and meeting all deadlines.

Technical Solutions Lead — Jesus Christ the Awesome God Church of Laguna Inc. (Freelance, Hybrid)

August 2024 – Present (ongoing, concurrent with full-time roles)

- Identified operational bottlenecks and architected custom software to modernize church administration and member engagement, owning the full development lifecycle.
- Built and launched a Church Management System (CMS) used by 120+ weekly active users, digitizing membership profiling and attendance monitoring with real-time reporting for leadership.
- Engineered a proposal-generation and email-distribution tool that automated event-planning workflows, cutting manual data entry and accelerating approvals.
- Worked directly with non-technical stakeholders to define requirements, run user training, and iterate on features from feedback.

Projects

Full write-ups and live demos at howstine.vercel.app/projects

- Agentic Crew Orchestrator (2026) — Python, multi-agent orchestration, OpenAI/Claude. Open-source multi-agent system (planner/researcher/executor pattern) with live dashboard, demonstrating production orchestration patterns.

- AI Content Automation Pipeline case study (2026) — Python, Firebase, OpenAI, Gemini. End-to-end scrape — AI-remix — classify — publish pipeline; public write-up of real production metrics.
- Church Management System (2024–Present) — Full-stack CMS live in production for a 120+ member organization; membership profiling, attendance tracking, automated proposal workflows.
- CentHRIS Finance/Payroll Modules (2025–2026) — PHP, Laravel, Nuxt, Vue, PostgreSQL, n8n. Payroll engines, tax rules, Finance workflows; n8n automation flows; full test coverage.
- e-Dukado LMS (2024) — Next.js, Supabase. Capstone LMS for a public elementary school.

Education

B.S. Information Technology — Polytechnic University of the Philippines, Sta. Rosa, Laguna (2024)
